Vulnerability Score & Categorization

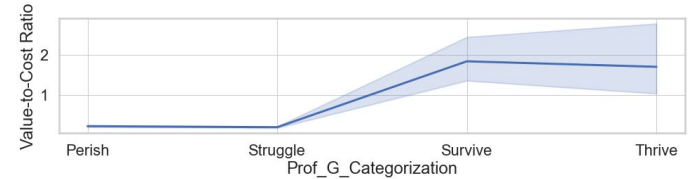

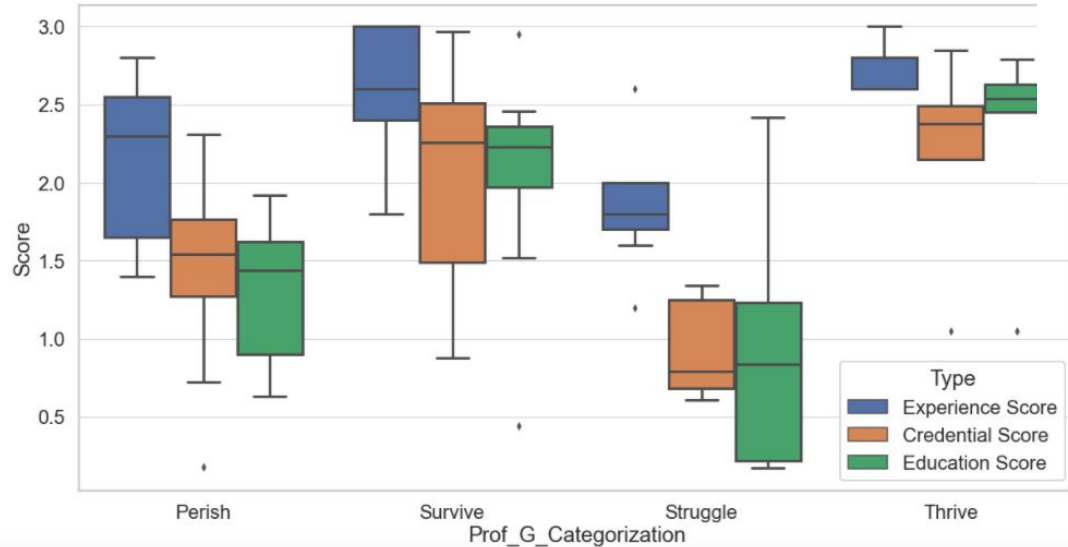

As indicated by this boxplot, a high Vulnerability Score (Endowment PctR + Inl Student PctR), in and of itself, does not seem to be the determining factor in whether a NY State school survives the pandemic, or is in danger of going under.

We wanted to delve a little deeper into the data to see if we could gain a better understanding of what factors a university might influence to nudge vulnerable schools towards a more favorable outcome, i.e. move them from struggle to survive.

Value

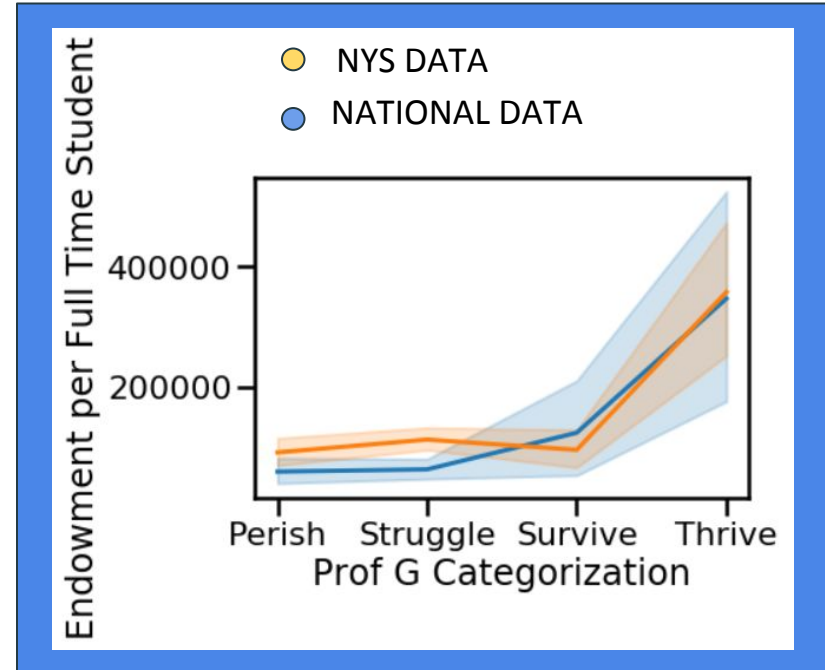

Credential, Experience & Education

- Looking at the Value-Ratio (above) we saw that most of NY schools are Surviving/Struggling.
- Upon further investigation (left) we see that Credentials should **NOT** be the focus to better our schools.

Endowment VS. Status

- Endowment is one of many contributing factors for University Status
- NYS(blue) has linear correlation between endowment and their status
- Those who are not Thriving would need to change their mission statement and research what they are doing to bring in more Endowments.

Thrive NY

Thank you!

Thrive NY - APPENDIX

Explanatory Factors That Also Impact Vulnerability Scores

These Variables Aren't Completely Independent of One Another, Yet They Influence A School's Status During a Pandemic

1. Percentage of International Students
2. Full-Time Enrollment
